

Week 4: Player Character Development

Activities Performed:

- Created and implemented the player character for the game.
- Set the initial position of the player on the game screen.
- Added basic player properties such as health, speed, width, and height.
- Implemented the player drawing method to display the character on the screen.
- Connected the Player class with the GamePanel to display the player.
- Tested the player character and verified that it appears correctly in the game window.

Outcome:

The player character has been successfully implemented and displayed on the game screen with its basic properties and starting position. The player is now ready for the movement system that will be implemented in the next phase.

All Codes :

➤ Player.java Code:

```
package pkg2dzombiesurvivalgame;
import java.awt.Color;
import java.awt.Graphics;
public class Player {
    int x;
    int y;
    int health;
    int speed;
    int width = 40;
    int height = 40;
    public Player() {
        x = 400;
        y = 300;
        health = 100;
        speed = 5; }
    public void draw(Graphics g) {
        g.setColor(Color.BLUE);
        g.fillRect(x, y, width, height);
    }
}
```

➤ GamePanel.java Code:

```
package pkg2dzombiesurvivalgame;
import javax.swing.JPanel;
import java.awt.Color;
import java.awt.Dimension;
import java.awt.Graphics;
public class GamePanel extends JPanel {
    final int screenWidth = 800;
    final int screenHeight = 600;
    Player player;
    public GamePanel() {
        this.setPreferredSize(
            new Dimension(screenWidth, screenHeight)
        );
        this.setBackground(Color.BLACK);
        this.setDoubleBuffered(true);

        player = new Player();
    }
    @Override
    protected void paintComponent(Graphics g) {
        super.paintComponent(g);
        g.setColor(Color.WHITE);
        g.drawString("Zombie Survival Game", 350, 50);
        player.draw(g);
    }
}
```
