

Week 7: Shooting & Collision Detection

Activities Performed:

- Added a bullet shooting system for the player.
- Implemented bullet movement.
- Added collision detection between bullets and zombies.
- Removed zombies when they are hit by bullets.
- Added a score counter for eliminated zombies.
- Tested the shooting and collision detection system.

Implementation Details:

In this phase, a shooting system was added to the player. The player can press the SPACE key to fire bullets.

The bullets move across the game screen after being created. Collision detection was implemented using the boundaries of the bullets and zombies. When a bullet comes into contact with a zombie, both the bullet and the affected zombie are removed from the game.

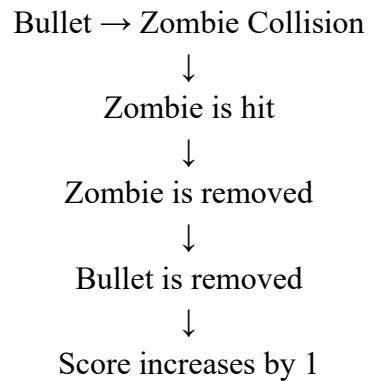

A basic score system was also added. The player's score increases by 1 whenever a zombie is successfully hit by a bullet.

Controls:

Key	Function
W	Move Up
S	Move Down
A	Move Left
D	Move Right
SPACE	Shoot Bullet

Collision Detection:

The game checks whether the bullet and zombie areas overlap.

If collision occurs:**Outcome:**

The shooting and collision detection system was successfully implemented. The player can now shoot bullets at zombies using the SPACE key. When a bullet hits a zombie, the zombie is removed and the player's score increases.

This completes the basic shooting and collision mechanics of the game. The next phase will focus on implementing the score and player health system.
